

Remarks

Applicant respectfully requests reconsideration of this application as amended.

Claims 7, 14, and 18 have been amended. Claim 13, 17, and 22 have been cancelled without prejudice. Therefore, claims 7-9, 14, 18-21 and 23-27 are presented for examination.

In the Office Action, claims 7-9, 13, 14 and 17-24 stand rejected under 35 U.S.C. §102(e) as being anticipated by Bang (Patent No. 6,522,530). In addition, claims 25-27 stand rejected under 35 U.S.C. §103(a) as being unpatentable over Bang. Applicant submits that the present claims are patentable over Bang.

Bang discloses a computer system that includes a monitor assembled with a main body. The computer system further includes a swiveling member installed between the main body and the monitor, allowing the monitor to be laterally swiveled relative to the main body, and a tilting member assembled with the swiveling member, allowing the monitor to be tilted transversely relative to the swiveling movement of the swiveling member. See Bang at Abstract ll. 1-8. Bang further discloses that the swiveling member includes a shaft that is secured by a set screw. See Bang at col. 5, ll. 4-5.

Claim 7 of the present application recites a display device mounted on a front face movably coupled to an enclosure for multiple degrees of freedom of movement for the display device, and an adjustable screw to lock the display device at a position. Applicant submits that Bang does not disclose or suggest such a feature. Bang discloses a set screw, however the set screw is used in the construction of the main body bracket that mounts the display device. See Bang at col. 5, ll. 4-5. In contrast, the adjustable screw, as recited in claim 7, is to lock the display device at a position, as opposed to the set screw in Bang that is

a part of the mounting construction, and not adjustable. Therefore, claim 7 is patentable over Bang.

Claims 9, 13 and 25 depend from claim 7 and include additional features, thus claims 9, 13 and 25 are also patentable over Bang.

Claim 14 recites a display device having a back end movably attached to an enclosure, to partially embed the back end of the display device within a rack mount appliance and enable multiple degrees of freedom of movement of the display device, and an adjustable screw to lock the display device at a position. Thus, for the reasons described above with respect to claim 7, claim 14 is also patentable Bang. Since claims 19-21 and 26 depend from claim 14 and include additional features, claims 19-21 and 26 are also patentable over Bang.

Claim 18 recites a rack mount server having an integrated display device wherein an end of the display device is coupled within the rack mount server via a movable coupling, to provide multiple degrees of freedom of movement for the display device, and an adjustable screw to lock the display device at a position. Thus, for the reasons described above with respect to claim 7, claim 18 is also patentable Bang. Since claims 23-24 and 27 depend from claim 14 and include additional features, claims 23-24 and 27 are also patentable over Bang.

Applicant respectfully submits that the rejections have been overcome and that the claims are in condition for allowance. Accordingly, applicant respectfully requests the rejections be withdrawn and the claims be allowed.

The Examiner is requested to call the undersigned at (303) 740-1980 if there remains any issue with allowance of the case.

Please charge any shortage to our Deposit Account No. 02-2666.

Respectfully submitted,

BLAKELY, SOKOLOFF, TAYLOR & ZAFMAN LLP
